How to File Upload and View with PHP and MySQL

On 12/11/2014 By Pradeep Khodke

👍   Tweet

We already have a Simple File Uploading tutorial in this blog and now This tutorial demonstrates how you can upload a files using PHP and Store uploaded file into the MySQL Database . With PHP it's easy to upload any files that you want to the server, you can upload MP3 , Image , Videos , PDF etc... files, this will also help you that how can you fetch uploaded files from MySQL Database and view them on Browser, so let's take a look.

Close X

File Uploading Into The Database

First of all here i'll show you that how you can upload files using simple html form that sends file to the database through PHP script.

Read also : Insert, Upload, Update, Delete an Image in PHP MySQL using PDO
Read also : Simple File Uploading Script using PHP
Read also : Ajax Image Upload using jQuery and PHP

In this tutorial i am going to store file name, file type, and file size.
import the following sql code in your phpmyadmin. **Database crediantials.**

```
1   CREATE DATABASE `dbtuts` ;
2   CREATE TABLE `dbtuts`.`tbl_uploads` (
3   `id` INT( 10 ) NOT NULL AUTO_INCREMENT PRIMARY KEY ,
4   `file` VARCHAR( 100 ) NOT NULL ,
5   `type` VARCHAR( 10 ) NOT NULL ,
6   `size` INT NOT NULL
```

```
7    ) ENGINE = MYISAM ;
```

Database configuration.

```
1    $dbhost = "localhost";
2    $dbuser = "root";
3    $dbpass = "";
4    $dbname = "dbtuts";
5    mysql_connect($dbhost,$dbuser,$dbpass) or die('cannot connect to the
6    server');
     mysql_select_db($dbname) or die('database selection problem');
```

the html form.

index.php

```
1    <!DOCTYPE html>
2    <html xmlns="http://www.w3.org/1999/xhtml">
3    <head>
4    <title>File Upload and view With PHP and MySql</title>
5    </head>
6    <body>
7    <form action="upload.php" method="post" enctype="multipart/form-
8    data">
9    <input type="file" name="file" />
10   <button type="submit" name="btn-upload">upload</button>
11   </form>
12   </body>
     </html>
```

above html form sends the data to the following PHP script and joining this html and php script you can easily upload files to the database .

upload.php

```
1    <?php
2    if(isset($_POST['btn-upload']))
```

```php
3  {
4
5    $file = rand(1000,100000)."-".$_FILES['file']['name'];
6        $file_loc = $_FILES['file']['tmp_name'];
7    $file_size = $_FILES['file']['size'];
8    $file_type = $_FILES['file']['type'];
9    $folder="uploads/";
10
11   move_uploaded_file($file_loc,$folder.$file);
12   $sql="INSERT INTO tbl_uploads(file,type,size)
13  VALUES('$file','$file_type','$file_size')";
14    mysql_query($sql);
15  }
    ?>
```

Display Files From MySql.

Now we are going to fetch uploaded files from MySql Database, data selecting from mysql database i hope you know that...

view.php

```php
1  <table width="80%" border="1">
2      <tr>
3      <td>File Name</td>
4      <td>File Type</td>
5      <td>File Size(KB)</td>
6      <td>View</td>
7      </tr>
8      <?php
9  $sql="SELECT * FROM tbl_uploads";
10  $result_set=mysql_query($sql);
11  while($row=mysql_fetch_array($result_set))
12  {
13   ?>
14          <tr>
15          <td><?php echo $row['file'] ?></td>
16          <td><?php echo $row['type'] ?></td>
17          <td><?php echo $row['size'] ?></td>
```

```
18          <td><a href="uploads/<?php echo $row['file'] ?>"
19   target="_blank">view file</a></td>
20          </tr>
21          <?php
22     }
23    ?>
     </table>
```

that's it

> Complete script.

dbconfig.php

```
1   ?<php
2   $dbhost = "localhost";
3   $dbuser = "root";
4   $dbpass = "";
5   $dbname = "dbtuts";
6   mysql_connect($dbhost,$dbuser,$dbpass) or die('cannot connect to the
7   server');
8   mysql_select_db($dbname) or die('database selection problem');
    ?>
```

index.php

First file with Html form which select the file from client to be upload.

```
1   <?php
2   include_once 'dbconfig.php';
3   ?>
4   <!DOCTYPE html>
5   <html xmlns="http://www.w3.org/1999/xhtml">
6   <head>
7   <title>File Uploading With PHP and MySql</title>
8   <link rel="stylesheet" href="style.css" type="text/css" />
9   </head>
10  <body>
```

```html
11  <div id="header">
12  <label>File Uploading With PHP and MySql</label>
13  </div>
14  <div id="body">
15   <form action="upload.php" method="post" enctype="multipart/form-
16  data">
17   <input type="file" name="file" />
18   <button type="submit" name="btn-upload">upload</button>
19   </form>
20      <br /><br />
21      <?php
22   if(isset($_GET['success']))
23   {
24    ?>
25          <label>File Uploaded Successfully...  <a
26  href="view.php">click here to view file.</a></label>
27          <?php
28   }
29   else if(isset($_GET['fail']))
30   {
31    ?>
32          <label>Problem While File Uploading !</label>
33          <?php
34   }
35   else
36   {
37    ?>
38          <label>Try to upload any files(PDF, DOC, EXE, VIDEO, MP3,
39  ZIP,etc...)</label>
40          <?php
41   }
42    ?>
43  </div>
44  <div id="footer">
45  <label>By <a
    href="http://cleartuts.blogspot.com">cleartuts.blogspot.com</a></lab
    el>
    </div>
    </body>
    </html>
```

upload.php this is the main PHP Script of this tutorial which uploads the file to the server.

```php
<?php
include_once 'dbconfig.php';
if(isset($_POST['btn-upload']))
{

 $file = rand(1000,100000)."-".$_FILES['file']['name'];
    $file_loc = $_FILES['file']['tmp_name'];
 $file_size = $_FILES['file']['size'];
 $file_type = $_FILES['file']['type'];
 $folder="uploads/";

 // new file size in KB
 $new_size = $file_size/1024;
 // new file size in KB

 // make file name in lower case
 $new_file_name = strtolower($file);
 // make file name in lower case

 $final_file=str_replace(' ','-',$new_file_name);

 if(move_uploaded_file($file_loc,$folder.$final_file))
 {
  $sql="INSERT INTO tbl_uploads(file,type,size)
VALUES('$final_file','$file_type','$new_size')";
  mysql_query($sql);
  ?>
  <script>
  alert('successfully uploaded');
        window.location.href='index.php?success';
        </script>
  <?php
 }
 else
 {
  ?>
  <script>
```

```
38      alert('error while uploading file');
39              window.location.href='index.php?fail';
40              </script>
41      <?php
42       }
43      }
      ?>
```

view.php

this file shows the uploaded file from the database.

```
1   <?php
2   include_once 'dbconfig.php';
3   ?>
4   <!DOCTYPE html>
5   <html xmlns="http://www.w3.org/1999/xhtml">
6   <head>
7   <title>File Uploading With PHP and MySql</title>
8   <link rel="stylesheet" href="style.css" type="text/css" />
9   </head>
10  <body>
11  <div id="header">
12  <label>File Uploading With PHP and MySql</label>
13  </div>
14  <div id="body">
15   <table width="80%" border="1">
16      <tr>
17      <th colspan="4">your uploads...<label><a href="index.php">upload
18  new files...</a></label></th>
19      </tr>
20      <tr>
21      <td>File Name</td>
22      <td>File Type</td>
23      <td>File Size(KB)</td>
24      <td>View</td>
25      </tr>
26      <?php
27   $sql="SELECT * FROM tbl_uploads";
28   $result_set=mysql_query($sql);
```

```php
29    while($row=mysql_fetch_array($result_set))
30    {
31     ?>
32            <tr>
33            <td><?php echo $row['file'] ?></td>
34            <td><?php echo $row['type'] ?></td>
35            <td><?php echo $row['size'] ?></td>
36            <td><a href="uploads/<?php echo $row['file'] ?>"
37   target="_blank">view file</a></td>
38            </tr>
39            <?php
40    }
41    ?>
42        </table>
43
44   </div>
     </body>
     </html>
```

style.css

and last but not the least stylesheet that makes beautify all the pages.

```css
1    @charset "utf-8";
2    /* CSS Document */
3
4    *
5    {
6     padding:0;
7     margin:0;
8    }
9    body
10   {
11    background:#fff;
12    font-family:Georgia, "Times New Roman", Times, serif;
13    text-align:center;
14   }
15   #header
16   {
17    background:#00a2d1;
```

```css
18    width:100%;
19    height:50px;
20    color:#fff;
21    font-size:36px;
22    font-family:Verdana, Geneva, sans-serif;
23    }
24  #body
25  {
26   margin-top:100px;
27  }
28  #body table
29  {
30   margin:0 auto;
31   position:relative;
32   bottom:50px;
33  }
34  table td,th
35  {
36   padding:20px;
37   border: solid #9fa8b0 1px;
38   border-collapse:collapse;
39  }
40  #footer
41  {
42   text-align:center;
43   position:absolute;
44   left:0;
45   right:0;
46   margin:0 auto;
47   bottom:50px;
48  }
```

That's it guys, please don't forget to share this tutorial.

hi olawole

thanx for visiting....

search for 'upload_max_filesize' in 'php.in' file and change it's value as you'r need, by default it's 2M

refer this : http://cleartuts.blogspot.in/2014/12/simple-file-uploading-with-php.html

Hi,

Thanks for this!

How could I make it so it doesn't error if there was no file uploaded? I have added this to an existing form and sometimes the file will intentionally be blank.

Thanks

Reply

PRADEEP KHODKE

6/12/2015 5:55 PM

create new two fields in your table for description and date, and make change in INSERT Query

as below :

$sql="INSERT INTO tbl_uploads(file,type,size,description,date)
VALUES('$final_file','$file_type','$new_size','$desc','$date')";

How I could upload data categorywise? i.e. if I have 3 categories and want to upload different files in different categories...

Reply

PRADEEP KHODKE
7/14/2015 10:53 PM

Hi Sunny :)

create select box to choose category and load category from table into the select box and set category id as a value in option element of select box then alter upload table and add category id as a new field for uploading file category and then make some change in insert query

Print Image name from MySQL Database into "<img>" element something like this
<img src="folder_name/<?php echo $row['file']; ?>" />

Reply

ANONYMOUS
7/31/2015 11:21 AM

Pradeep your tutorial is indeed very nice, you not only upload file but also store in the DB which is very good, but i notice that when you move_uploaded_file you do not use file extension move_uploaded_file($file_loc,$folder.$final_file) and this is working fine for you but when i move_uploaded_file without extension so file is uploaded without extension so file is not able to view, can you please tell me what is that? i also wrote tutorial about it but i keep extension also please check here https://htmlcssphptutorial.wordpress.com/2015/07/31/upload-file-using-php-and-save-in-folder/

Reply

8/02/2015 10:11 PM

Thanks for this tutorial. I would like to add two more components to this. 1. how to prevent duplicate file uploads, and 2. how to include the date when the file was uploaded, and have it displayed on the view.php page.

Reply

PRADEEP KHODKE

8/16/2015 9:14 AM

to prevent duplicate file upload you can use following function

if (file_exists($_FILES["file"]["name"]))

{

echo "Sorry, file already exists.";

}

to add date :

Alter   "tbl_uploads"   table   and   add   new   field   as   "uploaded_date"   with

"CURRENT_TIMESTAMP"

or select database then run following sql code inside phpMyAdmin

ALTER TABLE `tbl_uploads` ADD `uploaded_date` TIMESTAMP NOT NULL DEFAULT CURRENT_TIMESTAMP ;

or you can use

date(Y."/".m."/".d); function ,

just add this date function in sql insert query current date will be added..

Reply

PCBURNER
8/05/2015 3:20 AM

I'm getting errors when uploading files when I want to use the date when files are uploaded. What am I missing? Here's my code -

```
$file_date = $_FILES['file']['date'];
$folder="uploads/";

// new file size in KB
$new_size = $file_size/1024;
// new file size in KB

// make file name in lower case
$new_file_name = strtolower($file);
// make file name in lower case

$final_file=str_replace(' ','-',$new_file_name);

if(move_uploaded_file($file_loc,$folder.$final_file))
{
$sql="INSERT                    INTO                    tbl_uploads(file,type,size,date)
VALUES('$final_file','$file_type','$new_size','$file_date')";
```

Reply

PRADEEP KHODKE

8/16/2015 9:18 AM

$file_date = $_FILES['file']['date']; this is not file type

use this : $file_date = date(Y."/".m."/".d);

PCBURNER

9/18/2015 3:15 AM

How do I change this so I have the day,month, and then the year?

PRADEEP KHODKE

9/19/2015 11:14 AM

use this : $file_date = date(d."/".m."/".Y);

Hi Pradeep, Thanks for the awesome tutorial and scripts! it worked first time i tried it.

Just a quick question, how can I filter the upload files that are coming in? ex. only images and pdf can be uploaded.

Thanks!

Reply

PRADEEP KHODKE

8/16/2015 12:46 AM

to upload only images and pdf files, you have to check file extensions to be uploaded, use certain file types like jpg, png, pdf ...

use : $_FILES['field_name']['type'] to check file extension and make condition to upload ...

Reply

ANONYMOUS

8/08/2015 5:43 PM

great script Pradeep, but how to verify uploaded files are not malicious. I want users to upload .pdf files and diplay them as thumbnails for other users to open or download. thanks

8/18/2015 2:27 AM

Hi,

Thanks for the script, it is great. I'm just having one problem: When I upload a file, I just get a blank screen, no redirects or errors, and the file is not moved into the /uploads/ folder or entered into the database.

I only modified the database connect code with

//database credentials
define('DBHOST','x');
define('DBUSER','x');
define('DBPASS','x');
define('DBNAME','x'');

$db = new PDO("mysql:host=".DBHOST.";port=3306;dbname=".DBNAME, DBUSER, DBPASS);
$db->setAttribute(PDO::ATTR_ERRMODE, PDO::ERRMODE_EXCEPTION);

Thanks so much!

Reply

PRADEEP KHODKE

8/20/2015 10:27 PM

Hi...

as you modified only database connection code then you need to use "$db" variable with prepare and execute to work this script using PDO

ex :

$stmt = $db->prepare(query);
$stmt->execute();

hope this helps... :)

Reply

AULIA

8/18/2015 5:44 AM

thanks for the tutorial pradeep, this is what i searching for.
but can you tell me where the location of a script that displays pdf, doc, etc ??

Reply

PRADEEP KHODKE

8/20/2015 10:38 PM

Hi Aulia...

there is only one folder i have created here as "uploads" which stores all the types of file, and i have given only link of uploaded file... pdf can be displays on browser by clicking on the uploaded file link on view.php...

please help me out

Reply

PRADEEP KHODKE

8/20/2015 11:00 PM

this error might be on "view.php"

$sql="SELECT * FROM uploads";

$result_set=mysql_query($sql);

while($row=mysql_fetch_array($result_set))

this code is on view.php and make sure that you have changed table name yours is uploads and in this script i have used tbl_uploads...

JAYESH MANOHARAN

hi i have configured the script to my existing theme ..how to upload it from my website

PRADEEP KHODKE

10/31/2015 6:35 PM

hello jayesh,

uploading is same for localhost or online website , you can upload easily just put this script in your website with necessary configurations and you are done .

Hi Pradeep,

Your code is working perfectly, however I'm trying to restrict files from uploading if they do not have the defined extensions and file size. I have played about with alert boxes which advise the client that only certain files can be uploaded but when these boxes are closed the script continues to upload and insert the files. I've tried exit() and the die() but just get a blank page result. Is there a way to stop the script and exit back to the index.php and have the client retry?

ROSHAN DAVID

9/25/2015 5:01 PM

got it right on the second time thanks :D and can you tell me how to change this in oder to upload files in to several tables like for example there are 3 tables name 2010,2011,2012, user has to select a table and upload the file to that specific tabel?

PRADEEP KHODKE

9/25/2015 11:00 PM

Hi Roshan ,

if user has to select table to upload files in different tables for that you have to put select box and fill it's options with table name like below

<select name="tbl_name">
<option value="tbl_1">table one</option>
<option value="tbl_2">table two</option>
<option value="tbl_3">table three</option>
</select>

and take a variable for table name from above select list : $tbl = $_POST['tbl_name'];

after it put the $tbl variable in insert query like this :

INSERT INTO $tbl(file,type,size) VALUES('$file','$file_type','$file_size')";

if all uploading tables has same fields then it will work

hope it helps :)

9/26/2015 3:34 PM

my last question xD i upload a video to this database and from the view page how can i redirect to a seperate page by clicking on the video name or a new view button where i can watch it or simply in other words how can i make it open and view in another page? Thanks :)

PRADEEP KHODKE

9/29/2015 5:35 PM

hello roshan,
it's quite simple, from view.php as i displayed all the uploaded files within anchor tag, like this
<a href="uploads/<?php echo $row['file'] ?>" target="_blank">view file

just replace hrefs="" value and with page name with QueryString and in querystring define file id, then using query string fetch the file using $_GET[] function

<a href="pagename.php?file_id=<?php echo $row['id'] ?>" target="_blank">view file

Reply

HIMANSHU RANJAN

10/01/2015 9:32 AM

sir, can you explain..

$final_file=str_replace(' ','-',$new_file_name);

if(move_uploaded_file($file_tmp,$folder.$final_file))

Reply

PRADEEP KHODKE

10/02/2015 11:06 AM

hello himanshu,

here str_replace() function replace all the unwanted spaces with - (hyphen) and move_uploaded_file() function moves the file to the specified folder.

This is awesome!!!
I was wondering if there's a way to give the file a title when you upload so that when you view the HTML table it shows the title name instead of the file name? Example "Title of File" instead of filename.pdf

Reply

PRADEEP KHODKE
10/10/2015 11:53 AM

hello there, yes you can give title for file and you can also show file title in HTML table, just alter table and add new field as file_title and make some changes in insert query.

Reply

RISHI
10/15/2015 3:54 PM

Hey thanks for this tutorial....it really works but there is a problem with me........file is uploading in a local folder but not in mysql database.....tbl_uploads show empty and in view.php it shows nothing in table..

Reply

PRADEEP KHODKE
10/15/2015 11:19 PM

hello rishi,

please check MySQL Insert Query in "upload.php"

INSERT INTO tbl_uploads(file,type,size) VALUES('$file','$file_type','$file_size');

Reply

RISHI
10/16/2015 3:03 PM

It was

if(move_uploaded_file($file_loc,$folder.$final_file))
{
$sql="INSERT INTO tbl_uploads(file,type,size) VALUES('$final_file','$file_type','$new_size')";
mysql_query($sql);
?>

now I've change it to yours as

if(move_uploaded_file($file_loc,$folder.$final_file))
{
$sql="INSERT INTO tbl_uploads(file,type,size) VALUES('$file','$file_type','$file_size');";

still uploading in local folder uploads but table is empty in mysql....

please help me out

BLOG4BUCKS
11/17/2015 8:20 AM

Ya know, I got really excited when I read the title of the post, and the opening paragraph furthered that excitement. Why? Because I actually need the solution this article CLAIMS it will give (sadly it failed at delivery).

This article does NOT teach one how to do as the opening line claims, "Store uploaded file into the MySQL Database". Rather it teaches one how to upload a file to the server and store the location of that file in the database - which is vastly different. Using type largeblob, one should be able to store files in the database.... not locally on the server. That's what I am trying to learn about. If you have any articles about storing files directly into the database without local file storage, I really am interested.

Hi. everything is working great but my question is how do I insert a row from my userstable inte this table. for example I want to display the username of the user that have entered a file and also have a page where a user can view only the files they have entered. so I want to import the username from my user table into the sqlquery.

the same code is working fine on wamp server but when i uploaded site on server, after selecting image, when i am clicking on upload, blank screen comes up.
when i debugged it, echo statements are getting displayed before the following line :
if(move_uploaded_file($file_loc,$folder.$final_file))

please help

I have made small changes and have now managed to check for certain file types, do I need to do anything more

if($file_type != "video/mp4" && $file_type != "video/avi" && $file_type != "video/mov" && $file_type != "video/3gp" && $file_type != "video/mpeg")
{
?>

alert('Error: Suspicious file or not a valid video format ');

window.location.href='index.php?fail';

alert('successfully uploaded');

window.location.href='index.php?success';
